

Metal Fabrication

Welding

The **Welding and Sheet Metal** shop is the place to cut and join steel and aluminum to make functional as well as decorative items. The plasma cutting machines let you hand-cut sheet metal to make signs, art pieces and parts. The CNC plasma cutter allows you to go from a computer-based design to a cut piece. And welding lets you join the metals. Light forging and bending can be done with the Oxy Acetylene rigs.

Welding Studio Equipment List

- Four student welding stations with TIG and MIG capability using the latest Miller 215 MIG and TIG welders.
- Instructor station with TIG and MIG capability
- Plasma cutting table with manual and CNC cutting
- Hand and pedestal grinding equipment
- Two Oxyacetylene rigs
- Floor model drill press
- Vertical band saw
- Horizontal band saw
- Hoods, gloves and other safety equipment

Welding Assisted Studios

- Open Studio – Please see our calendar [here](#).
